## Green Space Museum Trail

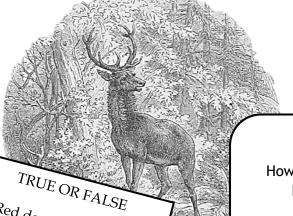

Find Bertie the badger!

Why do you think badgers have black and white fur?

Find the fossilised mammoth tusk. At the bottom of the case, you can also see a young mammoth's jaw!

Imagine you lived thousands of years ago: How would you feel if you came across a mammoth?

 $R_{
m ed} _{deer\,are\,th_{
m e}\,U\!K's} \ l_{argest\,deer}$ 

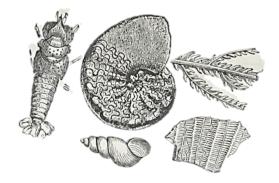

A stag is a full grown male deer.

How many prongs does he have on his antlers? Do you know what the name of a young male deer is?

Hint: It's also used as American slang for money

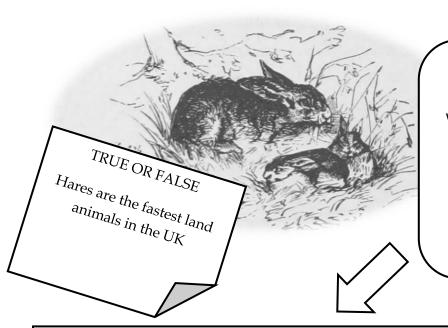

Fossils are the impressions of long gone plants and animals.

Can you spot fossils that are from the sea? Why do you think we find them here in Berkshire?

Turn over the page

Find the rabbit in the case, and the hare sitting opposite it.

Write down all the differences you can see between the two.

Find the birds that live by the water.

Look at the bottom shelf: How many types of beaks can you see? How many things can you think of that birds use their beaks for?

Look in the case
underneath the birds.
Choose a butterfly or
moth you like: what
colours can you see on it?

Find the birds to the left of the otter. These birds are either in danger of extinction (which means dying out) or have gone extinct.

What do you think may cause some animals to disappear? What can we do to prevent animals from dying out?

Well done! You finished the trail!
